Infor Cloverleaf Message Warehouse

Overview

A significant volume of data passes through your Infor™ Cloverleaf® Integration engine, originating from the hundreds of source systems you've connected with Cloverleaf. If you can capture and access this data for analysis, you can improve operational performance and clinical care initiatives.

The Infor Cloverleaf Message Warehouse automatically and seamlessly isolates selected data that passes through the Cloverleaf engine and stores these messages in an external database or data warehouse for reporting and analytics. For more defined analysis, Cloverleaf Message Warehouse can capture message metadata, as well.

When you add Infor Cloverleaf Message Warehouse, your Infor Cloverleaf solution becomes an even greater strategic resource to support operational and patient care excellence. You can share and collect data according to your specific needs to gain a clearer picture of your day-to-day operations.

Feature focus

With Infor Cloverleaf Message Warehouse, you can quickly and efficiently capture the information that matters—without affecting message routing. It works in conjunction with your database to deliver messages that you can integrate with an analysis tool for analysis and meaningful reporting. You can query and analyze captured messages to determine patterns or trends, or to improve workflow.

With this flexible solution that is configured on top of your Cloverleaf environment, you can:

- Capture and share data for analysis.
- Connect to ODBC- and JDBC-compliant databases.
- Write SQL queries or overlay a cube for analytics needs.

Benefits

- Capture the information that matters—without affecting message routing.
- Query and analyze captured messages to determine patterns or trends
- Better meet quality initiatives, regulatory, and certification standards.
- Identify opportunities to reduce costs, streamline your operations, and improve patient care.

Key benefits

With Cloverleaf Message Warehouse, you can:

- Capture and save data—as much or little as you want—into a single database management system that is ODBC- or JDBC-compliant.
- Upload stored data into your analytics tools to perform service-level analysis of interfaced applications.
- Mine, analyze, and report on data and metadata using your business intelligence tools.
- Capture the data necessary to complete reporting and analysis related to quality initiatives and other regulatory and certification standards.
- Identify opportunities to reduce costs, streamline your operations, and improve patient care.
- Conduct service-level analysis of interfaced applications to look for system efficiencies.
- Analyze data for utilization trending.
- Generate reports on Cloverleaf usage.

Get more information now

If you want to get more value from the data that passes through your Cloverleaf environment—to fulfill regulatory reporting mandates, to improve patient care, or to help your organization run more efficiently—Infor Cloverleaf Message Warehouse is the first step.
