

Accelerate your ERP system time to value

Take control of your enterprise applications and IT costs

When it comes to addressing market and customer demands, aging enterprise resource planning (ERP) applications can hold modern day businesses like yours back. Legacy systems can also keep you from delivering value instantly to your customers. That's why CFOs, who are attracted to the cost-effectiveness and scalability of connected enterprise management solutions, are being swayed by the compelling functionality of unified ERP and enterprise performance management (EPM) solutions.¹

Overcome the transformation challenge

According to Kate Leggett, VP and principal analyst at Forrester Research, "Companies are no longer purchasing heavy-weight, end-to-end solutions that have had the reputation of being complex, expensive, and hard to implement."² The reason why is simple to understand: These rigid IT environments are costly to maintain and expensive to change.

You can't afford to let your valuable data assets become trapped in legacy systems that lack the agility needed in today's self-service world. Your business applications must be able to support changes quickly, so you can keep pace—with your competitors, along with customer expectations—all while ensuring your continuous operations are free of service disruptions.

With Infor®, you gain a trusted partner to guide you on your journey. We deliver industry and domain expertise, configurable applications, and strategic planning capabilities supported by best-in-breed OLAP system architecture. We can help you modernize your finance operations and accelerate ERP time to value by showing you how you can utilize EPM solutions within your organization.

Gain significant benefits

Infor can help you realize a meaningful return on your ERP investment. We'll work with you to identify ways you can use your ERP system to:

- Align your business and IT goals, so you can build a streamlined, cost-effective portfolio that delivers optimum business value.
- Easily create "what-if" scenarios and DecisionPackages™ to better understand the implications of ERP transactional data.
- Discover G/L spend reduction opportunities from maintenance to innovation initiatives.
- Establish a framework for continuous ERP application monitoring and optimization.

"Companies are no longer purchasing heavy-weight, end-to-end solutions that have had the reputation of being complex, expensive, and hard to implement."

—Kate Leggett, Forrester Research
