

Adage MyDay

➔ Infor ERP Adage MyDay delivers flexible, role-specific, pre-defined and configurable metrics, reports, and alerts for key decision-making roles throughout the enterprise.

Do business better.

It's safe to assume your employees want to do the right thing for your business. But to get the most value from your motivated workforce, your company must have business processes and supporting information technology to help employees maximize their daily contribution. Accomplishing this depends largely on your ability to manage business information.

Every manufacturing company captures the business information necessary for effective decision making. But often the information is trapped in a database or in documents, and not easily accessed or analyzed. To empower employees with quick and efficient access to key business information, forward-thinking companies are enhancing their enterprise resource planning (ERP) system to identify the most critical focus areas, so individual employees minimize the time it takes to address major business challenges.

Leverage experience.

Infor™ ERP Adage MyDay delivers role-specific, pre-defined and configurable metrics, reports, and alerts for key decision-making roles throughout the enterprise. With Adage MyDay, Infor has created a flexible set of roles that can be tailored to your business, so employees have better insight into their most important tasks and the tools they need to take the right actions. The solution delivers a single source of normalized data for improved reporting.

INFOR™

By improving decision making at all levels of a manufacturing enterprise and strengthening strategic business measurement, Infor ERP Adage MyDay can set your company on a course toward more profits and growth.

Get business specific.

Infor ERP Adage MyDay delivers an integrated infrastructure for leveraging the powerful information captured and stored in your Infor ERP Adage solution. With Adage MyDay, the speed and effectiveness of decision making improves at all levels of your enterprise. The solution is built on Infor Open SOA, Infor's event-driven approach to service-oriented architecture, for fast and efficient communications of key business information.

Employees using Infor ERP Adage MyDay can quickly identify which areas need immediate attention and, as a result, minimize the time to mitigate problems. With those opportunities identified, employees can use Adage MyDay to easily and securely drill deep into the relevant business data stored within ERP Adage and retrieve information specific to a business problem or task. This makes it easier to investigate a business problem or challenge and reduce the time to correct that issue. In addition, Infor ERP Adage MyDay can be combined with other Infor solutions, such as Infor PM and Infor Decisions, to expand information analysis capabilities.

Adage MyDay helps improve the efficiency and effectiveness of several major business processes including:

Cost to service customers. Infor ERP Adage MyDay makes it possible to learn the true cost of serving individual customers. You can more effectively respond to mandates for cost reductions and add more customized services, such as radio frequency identification device (RFID) tags, shrink wrapping, or special labels. The solution delivers capabilities to analyze a wide range of specific business metrics, such as customer and product pricing, off-invoice discounts, and post-invoice discounts. With one view to the true cost of servicing individual customers and the ability to analyze order processing, accounts receivable, and inventory data, Infor ERP Adage MyDay helps you know when price concessions can be justified and what customers and products are the most profitable. With this insight, manufacturers can ensure their investments are being made in customers and products that produce the greatest return.

Cost of production and total cost of quality. As with customer service costs, the true cost of producing a product can only be determined by the analysis of a wide range of direct and indirect production costs. Infor ERP Adage MyDay allows you to identify trends, such as changes in commodity pricing or other costs or quality issues. The ability to identify areas that can be immediately addressed allows companies to continually eliminate unnecessary costs and improve quality. By using the industry-leading actual, standard, average, and other costing functions in Infor ERP Adage, you can analyze material usage, resource usage, and other specific production-related metrics to get a true cost of quality. For example, the solution can help a company spot situations where material and resource consumption is relatively high for the production level, which in all likelihood is an indication of a quality issue. As companies are increasingly forced to make tough decisions, the impact of a "one time" planner or scheduler's decision is isolated, making it less likely manufacturers will take the wrong course of action.

Cash flow. Infor ERP Adage MyDay provides tools for identifying and analyzing metrics that determine cash flow, which helps manufacturers increase their ability to manage their cash and minimize consumption of working capital. The solution helps you quickly identify any changes in your cash flow position and drill into the details

to find the cause, such as situations where customers are slow paying and where your perfect order rates are slipping. With this improved visibility, you have the ability to identify and act on problem areas such as when customers are claiming unallowed discounts for unsalable products. Armed with this critical information, companies can minimize the time to address cash flow issues.

See results now.

Faced with extraordinary financial pressures, virtually all companies are aggressively seeking ways to improve their decision making and operational efficiency. Infor ERP Adage MyDay supports these strategic objectives by streamlining the processes individual employees use to access and analyze the relevant business information they need for making business decisions that drive your overall success. Key benefits of Infor ERP Adage MyDay include:

- Reduced operational expenses
- Improved cash flow
- Higher profits
- Higher product quality
- Reduced time to correction for business problems
- Increased revenue

Infor ERP Adage MyDay can set your company on a course toward more profits and growth.

About Infor.

Infor acquires and develops functionally rich software backed by thousands of domain experts and then makes it better through continuous innovation, faster implementation options, global enablement, and flexible buying options. In a few short years, Infor has become one of the largest providers of business software in the world. For additional information, visit www.infor.com.

 Employees using Infor ERP Adage MyDay can quickly identify which areas need immediate attention and, as a result, minimize the time to mitigate problems.
