Infor Fashion for yarns, threads, and fibers

Weaving new possibilities for spinners and finishers

Infor Fashion is an integrated enterprise management system designed for the needs of yarn, thread, and other fiber processers. Whether you spin and finish natural fibers such as wool, cotton, cashmere, and silk, or produce extruded or melt-spun synthetic fibers such as polypropelene, polyester, rayon, nylon, or new hi-tech fibers, Infor Fashion provides the functionality to integrate your business activities. It is designed to simplify every aspect of your supply chain operations.

Simplify your supply chain

Infor Fashion is designed to support organizations with more than one company and multiple sites, and that work in many currencies, languages and time zones. It supports over 20 languages and accommodates othercountry-specific requirements. For yarn and threadmanufacturers, Infor Fashion supports raw fiber dying, blending, carding, spinning, winding, twisting, plying, and marling. For synthetic fiber manufacturers, it supports mixing, extrusion, and winding.

With a significant investment of capital in specialized equipment, you need to maximize the utilization of your assets, manage their maintenance, and avoid unnecessary changeovers. Infor Fashion synchronizes demand and supply throughout your enterprise. It has the ability to plan cost-optimized stock build-ups to meet seasonal peaks in demand from your knitting and weaving customers, while integrated financials provide an up-to-date view of your performance.

Optimize production planning to maximize equipment utilization and minimize changeovers with Infor Fashion.

Get industry-specific functionality

Infor Fashion can be configured to meet your specific requirements. The scalability and parameter-driven flexibility of Infor Fashion allows it to be used by companies of all sizes. The solution is ideal for handling a wide product variety and a mix of make-to-stock and make-to-order goods, as well as both process and discrete manufacturing.

It incorporates functionality such as:

- A matrix that supports customer, purchase, manufacturing and distribution orders. The matrix can handle product group, spool size, color, and Denier/gauge.
- Attributes such as quality, color, coarseness, and moisture content, which can be maintained against individual raw bale and finished good lots.
- Forecasting and forecast consumption at the product group level.
- Catch weight features that support the variation in weight between different lots.
- Compensators that take account of moisture content levels during planning and manufacturing.
- Customer-specific price lists, to maximize sales and profitability.
- Global Capable-to-Promise functions, providing customers with realistic delivery dates during order entry.
- e-Sales functions that reduce the cost of small-volume sales.

Improve delivery performance, capacity utilization

The yarn, thread, and synthetic fiber industries are characterized by global supply chains. Total supply lead times are relatively long and the business is seasonal, with current fashion dictating the color trends for a season. The pressure on yarn, thread, and fiber suppliers to deliver accurately to the agreed date, quantity and quality is intense. Infor Fashion encompasses all aspects of supply chain management to allow you to:

- Consolidate demand plans from multiple sources, including historical sales, product manager knowledge, and account manager customer predictions.
- Determine raw material purchase requirements and planning across the supply chain.
- Synchronize the material flow throughout the supply chain.
- Optimize production planning to maximize equipment utilization and minimize changeovers.
- Effectively manage warehouses and inventory.
- Immediately identify and react to exception conditions, thanks to reliable business intelligence.
