

Infor SCM Fleet Routing

➔ Infor SCM Fleet Routing is a powerful automated fleet planning system that can help you create the most efficient routing and scheduling plans for your business.

Do business better.

Managing a fleet is an intensive business process on a number of levels. It's capital intensive because tractors, trailers, and the supporting equipment require a major investment. It's people intensive because scheduling drivers and support staff is complex, and must be done in compliance with government regulations and union rules. The rigors of the job for drivers and those who support them also make maintaining employee morale a key challenge. Despite these challenges, there are ways to increase your truck and trailer utilization, and keep your employees satisfied and motivated. The key is implementing a solution that can help you manage your fleet routing challenges.

Leverage experience.

Infor™ SCM Fleet Routing is a powerful automated fleet planning system that can help you create the most efficient routing and scheduling plans for your business. The solution enables you to create a plan that optimizes the allocation of your fleet and workforce. It allows you to incorporate all important variables—pick up and delivery windows, appointment times, load and unload times, product-to-vehicle compatibility, driver assignments and more—to develop a plan that works best for your company, your customers, and your employees.

Get business specific.

Infor SCM Fleet Routing uses sophisticated optimization, analysis, and scheduling tools to increase the return from your assets, drivers, and routing strategy.

INFOR™

Specific capabilities include:

Route optimization—develop the best plan

Infor SCM Fleet Routing provides the tools you need to create optimal daily or multi-period routes and schedules. You can issue fleet directives, monitor execution, alert dispatchers of potential problems, do re-planning, and measure performance. Wireless tracking, real-time visualization, and export of route changes are also enabled, making it easy to integrate same-day orders.

Real-time monitoring—keep the plan on track

Fleet routing plans invariably require adjustment to overcome unforeseen developments like traffic jams, bad weather, equipment failures, and longer loading or unloading times. The solution includes capabilities to easily alter driving times, and loading and unloading times by client. You can adjust break times and other variables to get the plan back on track.

Specialized routing—support unique needs

With its special algorithms, Infor SCM Fleet Routing facilitates efficient routing of service technicians, enabling you to assign qualified technicians to particular jobs. The solution also supports dynamic sourcing for companies with commodity bulk liquid and gas products where many source locations may exist, and for industries such as dairy processing and environmental services with multiple destination locations. You can also intelligently route multi-compartment vehicles for these industries.

Analysis—make insightful strategic decisions

The analysis capabilities in Infor SCM Fleet Routing allow you to construct fixed or master routes, align customer territories, size fleets, and analyze service frequencies, as well as see the impact of strategy changes on dispatch operations before actual implementation. Using advanced optimization tools, you can build on your master plan, adapt master routes, and create new ones as business conditions dictate.

Reporting—integrate fleet routing into your enterprise

With Infor SCM Fleet Routing, it is easy to develop detailed reports that highlight numerous operational metrics, including miles driven, overtime paid, and service levels.

See results now.

By implementing Infor SCM Fleet Routing, you can improve the efficiency and cost effectiveness of your fleet operations. The solution gives you the confidence to agree to more accurate delivery times and expand the number of customers your staff and equipment can serve without increasing your investment in assets. Customers report numerous business benefits, including:

- 5 – 7 % reduction in transportation and routing costs
- 5 – 10 % increase in service levels achieved
- Improved asset utilization
- Automation of routing processes
- Improved customer satisfaction.

About Infor.

Infor acquires and develops functionally rich software backed by thousands of domain experts and then makes it better through continuous innovation, faster implementation options, global enablement, and flexible buying options. In a few short years, Infor has become one of the largest providers of business software in the world. For additional information, visit www.infor.com.
