

Infor FMS Infinium helps you build a strong, secure financial foundation and move beyond transaction processing.

INFOR FMS INFINIUM

DO BUSINESS BETTER.

You can't put financial management on autopilot, at least not for long. Successful organizations know that constantly changing financial conditions demand ongoing attention to ensure continued success. To pilot your financial affairs effectively, you need a financial management "dashboard" that gives you a big-picture look at all the complex, interconnected parts that make up your financial organization. You also need a system that helps you focus your attention on financial decisions, rather than on managing the system itself. As your organization becomes larger, the importance of a smoothly-running, well-integrated financial management system only becomes that much more important.

LEVERAGE EXPERIENCE.

Infor™ FMS Infinium's power to manage financial complexity is well-known. But you probably can't wait months or years to get that power; you need it now. That's why Infor focuses on faster starts and shorter implementation times to deliver an immediate impact at a lower cost.

Our world-class Professional Services team knows your unique operational, geographical, regulatory, and competitive requirements, no matter where in the world you're located. These experts have years of on-the-job, financial experience in companies just like yours. After decades of keeping projects on target, on track, and within budget, they know how to get you where you need to be, when you need to be there, at a cost you can easily justify.

GET BUSINESS SPECIFIC.

Infor FMS Infinium can make a critical difference in your organization. Just pick the components that are right for you and your business. You'll see why hundreds of customers around the world are satisfied they found the right solution in Infor FMS Infinium.

General ledger.

As the core of Infor FMS Infinium, general ledger streamlines and automates processes, ensures bottomline results, and helps you do more with less. Like the rest of the Infor FMS Infinium solution, general ledger supports the multi-company, multidivisional, multicurrency organization, and allows for different charts of accounts and fiscal calendars, as well as multiple, unique consolidations. It also supports unlimited budgets and forecasts and performs user-defined allocations on monetary, budgetary, statistical, and historical balances.

Payables ledger.

Payables ledger takes the worry out of your payables functions, so you're free to focus on accounts payables management and to anticipate future cash requirements. You get the control and flexibility you need to execute your payables process within the appropriate parameters for your organization. Valuable information, such as discounts and vendor volume, becomes easily accessible—providing you with the facts you need to negotiate better vendor contracts. Plus, payables ledger gives you flexible controls and processing options to minimize data entry time. For example, its high-volume invoice entry function repeats common information across invoices and speeds invoice processing using defaults that you define.

Accounts receivable.

Accounts receivable delivers an accurate and comprehensive solution with powerful flexibility in data definition, navigation, processing, and reporting structure so that you can maximize your receivables and achieve your business goals. You get effective receivables management with a four-tier system setup for organizing policy data—entity level, company level, national account level, and customer level—with each level subordinate to the next.

The solution also offers a well-designed, easily maintained customer master, and delivers full cash application, credit management, and customer management functionality, as well as a wide range of flexible and efficient processing options.

Cashbook.

Cashbook is fully integrated with general ledger, payables, and accounts receivable, to provide a central point for processing all bank reconciliation transactions, making it possible to see all uncleared checks and receipts in one place. You can select multiple payments or receipts to be cleared; reconcile items not closed in general ledger; make entries in general ledger from cashbook; automatically verify differences between payments and receipts; and input memorandum items and balancing entries. Recurring payments, planned payment schedules, manual payments, and internal process security controls are also available. As a result, you get a better picture of your true cash position and improved corporate reporting.

Fixed assets.

Fixed assets gives you the control and flexibility that careful asset management demands. Fully interactive and designed for multi-company, multi-divisional processing and reporting, it simplifies and provides complete control of your asset management, from asset acquisition to retirement and replacement planning. It allows you to manage assets through their entire lifecycle and report across single or multiple divisions and the whole enterprise, as well as meet the most stringent, up-to-date tax and depreciation reporting requirements.

Project accounting.

Project accounting gives you the control and flexibility you need to manage special projects. It cuts across the boundaries of traditional accounting systems to provide complete administration and integrate project activity from an unlimited number of cross-functional sources in your organization. You get a cradle-to-grave, project-based view with unlimited budgeting, inquiry, and reporting, plus a complete cost history of all projects so you can estimate better on future projects.

Currency management.

Currency management helps you manage the details that go with running a complex, multinational business. This euro-compliant solution can handle all of your organization's currency requirements—from subsidiary ledger to financial statements accurately, efficiently, and with complete attention to detail.

Global taxation.

Global taxation addresses issues that call for consistency and simplification by centralizing all tax processing and reporting. You can handle local, national, and multinational tax reporting requirements with ease. Its history file supports industry-standard reporting tools so that you can effortlessly accommodate reporting demands.

Infor HCM.

Infor HCM helps companies put complete recruitment-to-retain HR processes into action with a comprehensive set of solutions that streamline long-term business strategies. With superior HCM performance delivered by one of the world's leading enterprise resource planning (ERP) providers, its tight HCM to ERP integration can make your HR solution a strategic element in the success of your business.

Infor HCM includes flexible, scalable, solutions that help you leverage your existing technology investments, achieve lower total cost of ownership and address the most pressing HR-related business challenges, including:

A system that helps you focus your attention on financial decisions, rather than on managing the system itself.

Human resources.

This set of components delivers web-based workforce management from hiring to retirement that maximizes efficiency, freeing up employees to spend more time supporting the overall business strategy.

Benefits administration.

The Benefits Administration module gives you all the tools you need to manage and control multiple progressive benefit plans. It provides comprehensive dependent and beneficiary tracking, linking each dependent or beneficiary to the appropriate benefit plan.

Compensation.

The Compensation module helps formulate and apply rules for corporate pay policies. It also helps create a workflow driven salary administration environment supporting all types of managerial roles within an organization.

Payroll.

Payroll provides a robust, reliable, and comprehensive payroll and taxation solution, as well as seamless integration with Infor's financial management solutions.

Employee and manager self-service.

Employee and manager self-service lets employees view and update personal and payroll information, enroll in training, model and update benefits, and directly enroll in the plans of their choice. They can also review their benefits summary, make paid time-off requests, and check whether direct deposits have been made into their accounts. Managers can perform status changes for their employees and enroll them in training.

Time and attendance.

The time and attendance module allows companies with complex work and pay rules to collect and validate time and attendance and labor data. It offers an automated method that employees can use to record time and labor themselves and that supervisors can use to monitor attendance, labor, and material movement in real time.

Workflow.

Infor HCM provides integrated, XML-based workflows that automate the connections between routine administrative tasks to streamline and secure the review and approval of HCM processes and to capture and monitor key events.

Recruitment.

This multilingual, multicurrency, web-based recruiting component helps your company attract and retain talented people, hire the right individual for every position, and manage both salaried and hourly hiring.

Employee performance management.

The employee performance management module helps you track and manage the development of talent across your organization, nurture leaders and promote future innovation and growth.

SEE RESULTS NOW.
