

Extend your Infopoint system to keep ahead of today's complex banking environment by adding Infor FMS Infopoint Transaction Processing.

## TRANSACTION PROCESSING

### **DO BUSINESS BETTER.**

Today's increasingly complex banking environment requires you to cope with an expanding array of new equipment and services, as well as with new Federal Reserve pricing for services. To reduce risk and improve performance, you need an innovative, proactive approach to daily internal control. For many financial institutions, the greatest opportunities for operational improvement lie in transaction processing. When you streamline item processing operations and improve collection of transit checks, you're building a foundation for sustainable, long-term growth in revenue, earnings, and market share.

### **LEVERAGE EXPERIENCE.**

Infor™ FMS Infopoint solutions help you extend the effectiveness of your core banking applications throughout your organization for the benefit of every department and every customer. Built on decades of experience in creating financial management systems, the Infor FMS Infopoint Transaction Processing suite helps banks work more efficiently, accurately, and profitably. Our quarter century of experience in developing solutions for every type of bank means that you can have confidence that you've trusted your critical transaction processing to systems that have withstood the test of time.

## GET BUSINESS SPECIFIC.

The Infor FMS Infopoint Transaction Processing suite helps you rise to the challenges of today's volatile banking environment. This comprehensive solution consolidates capture, reconciliation, distribution, reporting, and sorting of all input for maximum efficiency and control, resulting in significant reduction of operating costs. Any high-volume, deadline-driven financial system depends on a well-supported processing infrastructure for efficient performance without errors. Infopoint Transaction Processing makes the cost of preventing errors even lower than the cost of correcting those errors. This solution delivers operational excellence to your financial institution through a combination of powerful modules, including:

### Infor FMS Infopoint SuperMICR.

The Infor FMS Infopoint SuperMICR family of solutions offers a comprehensive range of features for online item capture, distribution, reporting, and sorting in order to reduce processing expenses, increase operating control, improve personnel productivity, and analyze float. As a result, you'll gain more effective use of equipment, improved clerical productivity, lowered item costs, enhanced audit features, comprehensive restart and recovery, increased processing security, and maximized float management.

### Infor FMS Infopoint SuperMICR POD.

The Proof of Deposit processing features include capture, reject re-entry, online reconciliation, cash management, application file extract, and reporting.

### Infor FMS Infopoint SuperMICR Multi-sort.

This comprehensive bulk file system features exception item pull, cycle sort, group sort, statement sort, and fine sort. It also provides online tracking of all MICR documents that have been bulk filed.

### Infor FMS Infopoint SuperMICR Image Link.

This module includes interfaces and support for many different image capture devices and systems. It interfaces with NCR ImageMark POD and drives IBM 3897 image capture in conjunction with Fiserv CheckImage Management System (CIMS), Metavante Vector Capture for Prime Pass, and Software Earnings Image Archive Exchange.

### Infor FMS Infopoint SuperMICR Float Pricing System.

This system assigns bank and customer float and item prices. It also supports unique price tables, float tables, and deadlines for groups of premium accounts. With comprehensive reporting and PC-based query into the float history files, FPS also allows you to post float adjustments on delayed cash letters.

Infor FMS Infopoint SuperMICR features include:

- ▶ Image capture support with IBM 3890/XP with IBM 3897 image camera
- ▶ Image capture support with Unisys and NCR sorters with image camera
- ▶ IBM 3890 and 389x/XP capture
- ▶ Non-MICR capture
- ▶ Commingled inclearings and POD
- ▶ Online reader / sorter control
- ▶ Online reject re-entry, job, block, batch transaction balancing
- ▶ Automatic cash letters
- ▶ Balancing reports
- ▶ Multi-level transit and endpoint analysis
- ▶ Multiple field fine sort
- ▶ Image matching and sequence checking

- ▶ ItemTrac Vaulting
- ▶ Same day float adjustments
- ▶ Account level endpoint analysis
- ▶ 999 sets of unique float and tier price tables
- ▶ Restart/Recovery capabilities
- ▶ Intraday cash management
- ▶ High and low dollar cutting

### Additional SuperMICR solutions.

#### **Infor FMS Infopoint SuperMICR Gateway Solution.**

This gateway manages the communication and data exchange between the SuperMICR host and third-party applications by performing three essential tasks: It processes requests from third-party products that require SuperMICR data and services, provides a point of contact that allows the SuperMICR host to communicate events and respond to data or service requests, and allows the system to connect with future SuperMICR products. In addition, the gateway supports all ASCII to EBCDIC translations required for successful data exchange and processing.

#### **Infor FMS Infopoint SuperMICR Maintenance Solution.**

A browser-based application, this module maintains all processing parameters currently supported in the Infopoint SuperMICR POD capture system.

**Improve operational excellence and achieve greater accuracy without compromising accountability.**

As a stand-alone application it helps you reduce support costs, strengthen access and control, increase productivity, and enhance the overall user experience.

#### **Infor FMS Infopoint SuperMICR Duplicate Check Solution.**

Perhaps the biggest challenge with check image exchange is preventing the presentment of images of items more than one time. Even though the design of the X9.37 file includes unique file identifiers that should prevent processing the same item multiple times, under real world conditions, items sometimes get duplicated and accidentally bypass those safeguards.

The SuperMICR Item Level Duplicate Check Solution helps you deal with situations in which a significant number of items have been duplicated from the source. For example, when a file is transmitted twice but with two different time stamps, it can slip through undetected in the consolidation process. When one of these files is caught in the duplicate check process, the item can be deleted in SuperMICR.

The Item Level Duplicate Check Solution will help you to:

- ▶ Identify duplicates at the earliest possible point.
- ▶ Stop the processing of duplicates on day one.
- ▶ Reduce research time identifying duplicates.
- ▶ Cut time lost in processing returned duplicate items.
- ▶ Improve the quality of customer service.

## SEE RESULTS NOW.

Infor FMS Infopoint Transaction Processing can help you improve operational excellence and achieve greater accuracy without compromising accountability. You'll also gain the ability to serve customers more efficiently and build profitable opportunities for expanding those relationships as time goes on. By extending your Infopoint system to include the full range of transaction processing capabilities, you'll preserve the value of your current system and position your organization for maximum stability in the years ahead.

## THERE IS A BETTER WAY.

At Infor, we work with a core belief. We believe in the customer. We believe that the customer is seeking a better, more collaborative relationship with its business software provider. And a new breed of business software: created for evolution, not revolution. Software that's simple to buy, easy to deploy and convenient to manage. Our 70,000 customers in more than 100 countries stand with us. We look forward to your sharing in the results of our belief. There is a better way.
