

Infor ION Business Vault

Better information yields better results

Business systems generate vast quantities of transactional data every day that could provide valuable insight for decision making—if you could access and analyze it quickly enough. Up until now, making that information actionable typically involved a laborious process of extracting data from multiple systems, one at a time, matching each data set field-by-field, then running reports. By the time you got an answer, everyone forgot the question. Infor™ ION Business Vault leverages flexible, modern technology standards to deliver faster, more meaningful management information from the business systems you already have.

Innovative technology delivers competitive advantage

Add new levels of intelligence and sophistication to your existing business software with innovative ION technology from Infor, which replaces traditional middleware solutions with a speedy, lightweight connective structure for faster, more accurate results. Infor brings decades of industry-specific experience to the task of solving the exact problems that make the biggest differences to our customers. Today's customers face endless demands for greater speed, and a need to cope with larger data volumes and escalating complexity, while containing costs. Infor ION technology adds a powerful, unified combination of contextual business intelligence, common reporting and analysis, streamlined workflow, and business monitoring, all delivered within a single, consistent architecture.

Leading-edge architecture builds speed

ION Business Vault dramatically accelerates reporting and analytics by moving critical background functions

Infor ION Business Vault adds unparalleled speed, flexibility, and reliability to your analytics and reporting processes.

onto a separate, dedicated resource, making it unnecessary to wait overnight for analysis of critical business data. And because ION Business Vault draws on rich data connections between many different types of data systems, it can rapidly reveal issues affecting different parts of your business that you might not otherwise recognize.

As a result, you'll get:

- **Easier search.** When data resides in one place, there's no need to index your transactional systems.
- **Better reporting.** Business Vault's advanced data management capabilities ensure that your data is always consistent and relevant across your entire organization.
- **Up-to-date data.** Event-driven synchronization ensures that data is up-to-date as soon as each transaction occurs in the originating system.
- **Unbreakable reporting.** In the past, upgrading a business system would break the reports that drew data from that system. With Business Vault, you can upgrade systems without having to rebuild all the associated reports.

Infor ION Business Vault provides a single, optimized repository for the data generated by your transactional systems. A secure reservoir for transaction data from multiple business systems gives you an easy way to mine your data for more flexible, powerful reporting, business intelligence, and analytics.

In addition, by shifting reporting data to a dedicated system, Business Vault allows your transactional

systems to run faster, without being bogged down due to the system resources required for reporting.

But the true source of Business Vault's power comes from the way it intelligently processes, structures, and organizes the data it draws from your other business systems. Because Business Vault combines swift, modern, message-driven standards with a lightweight, flexible architecture, you get faster answers to give you an unmatched advantage in an accelerating business environment.

Fresh approach translates to great results

You'll gain the competitive advantage of speed and improved knowledge, thanks to Infor ION Business Vault's fresh new approach to timely reporting and analytics. In addition, as a core resource in the Infor ION architecture, Business Vault immediately increases the value that you can generate from your existing business systems. But above all, it give you unparalleled flexibility and reliability in the analytics and reporting processes that allow you to make quick, confident decisions that lead to long term success.

**Get faster, more meaningful
management information from the
business systems you already have.**
