

Infor Public Sector Roadway

Manage complex roadway assets

Included in a government agency responsibility, there are hundreds or even thousands of miles of streets and highways with constantly changing conditions and many hidden costs. You can only effectively manage a complex network of linear assets like this if you have the right tools. Of course, that means having the right backhoes, pickup trucks, pavers, and other pieces of physical equipment. There's also another type of tool you need—a specialized software solution that gives you accurate information about the conditions of your roads and highways, and the capabilities you need to keep these assets in good condition at the lowest possible costs.

Use software designed for road asset management

With Infor™ Public Sector Roadway, you'll streamline how you manage linear networks of streets, highways, and their related assets. You'll get capabilities to manage transportation networks intuitively because you can view each roadway as a continuous asset, not a series of artificial segments. Public Sector Roadway takes advantage of Infor's extensive public sector experience to help you increase the productivity of field and office employees assigned to maintain and manage your streets and highways.

Analyze and act on your roadway challenges

Public Sector Roadway gives your transportation employees operational visibility of all roadway assets, their condition, maintenance and repair projects in process, and the analytical capabilities you need to get the best return from your transportation budget. A web-based solution with a thin footprint, the solution is easy to implement and easy for your employees to learn. Key capabilities include.

With Public Sector Roadway, you'll streamline how you manage linear networks of streets, highways, and their related assets.

- Roadway viewer—Manage roadways intuitively by viewing each road as a straight-line or strip diagram, so employees have accurate and timely data in a format that aligns with what the see in the field. View all assets and operational data on a single screen.
- Transportation asset condition inspection—Inspect and rate the condition of all transportation assets, including roadways and related assets like guard rails, signs, and traffic signals. Track and monitor key performance indicators using existing condition data and collection models.
- Pavement management—Build and manage your own decision logic for determining project priorities. Automatically update roadway conditions following maintenance projects. Perform what-if analysis to compare the outcomes of multiple budget scenarios.
- Roadway asset management—Record roadway conditions, calculate and report roadway asset value, develop repair plans, and implement a comprehensive and cost-effective maintenance program.
- Customer service—Manage roadways based on customer-driven issues instead of using a construction/maintenance view of work requirements. Track service levels and initiate work and inspections based on customer input.

Increase roadway management ROI

Use Infor Public Sector Roadway to efficiently manage your roadway network. The solution will help you:

- Increase productivity of employees working on streets and highways.
- Reduce systems management time.
- More effectively analyze conditions and establish project priorities.
- More effectively assign and communicate workload to employees and outside vendors.
- · Increase revenue from fees and reimbursements.
