Introducing Infor Supply Chain Execution

Infor® Supply Chain Execution combines a best-in-class warehouse management system (WMS) with transportation management, labor management, and 3PL billing on a single application whose unified database reduces the complexity of warehousing and logistics management.

Engineered for speed, agility, and change

Today’s customers have heightened demands for service and value. Quality, cost, and speed are no longer trade-offs in their minds; they expect all three. Companies that want to deliver on complex needs, while maintaining profitability across the supply chain, require a single scope of view across all customers, contractors, and suppliers. This way, they can create efficiencies holistically. Using an end-to-end warehouse management system, with built-in labor management and transportation functionality, can create exponential value.

- Optimize distribution across multiple workflows with Infor Supply Chain Execution.
Agility for business growth

Leaders and laggards are increasingly defined by their ability (or inability) to deliver greater customer value at lower cost, and often, by how quickly and nimbly they can execute. In the world of warehouse management, this ties back to key success factors: efficient warehouse operations, optimal labor management, task management, and cost-effective transportation execution.

Modern, industry-specific solutions

A unified solution for warehouse management tasks eliminates friction and information silos, empowering businesses to operate at a quicker pace and deliver greater value at lower costs. With Infor Supply Chain Execution, you can view and manage execution activities in a single dashboard, thereby proactively eliminating bottlenecks and improving overall efficiency. End-to-end visibility enables you to make better decisions. More importantly, it enables rapid execution upon those decisions to improve profitability.

Built from the ground up with the functionality of six warehouse management solutions, Infor Supply Chain Execution combines best-of-breed functionality and supply chain connectivity with a modern user experience that includes mobility consoles, web RF, voice support, in-context reports, and business intelligence dashboards.

Infor’s warehouse management system delivers the flexibility and configurability needed to operate an agile, customer-centric business. The solution takes advantage of Infor ION, a new generation of business middleware that puts better information into the hands of users, faster. As the underlying architecture for Infor Supply Chain Execution, Infor ION streamlines workflow—and enables flexible deployment options including on-premises, in the cloud, and hosted.
Visibility for greater value and performance

Infor Supply Chain Execution gives you coherent, valid information from a single source so that you can operate more efficiently, and give your customers information that inspires confidence.

Best-of-breed capabilities

Improve workforce productivity
Embedded labor management in the WMS allows you to monitor the workforce in real time and provide immediate feedback to optimize performance.

Achieve greater visibility
Interactive dashboards, reports, mobile applications, analytics, and business intelligence provide managers with actionable information.

Collaborate and communicate
Infor Supply Chain Execution and Infor Ming.le® empower users to send notifications and alerts across applications and organizational structures.

Optimize your facility
Innovative features such as cross-docking, web receiving, attribute capture (including serialization), multi-sequenced put-away, task interleaving, dynamic slotting, wave management, and shipping (LTL and small parcel), allow users to optimize processes while reducing operational costs.

Integrate easily
Infor ION seamlessly integrates various supply chain applications using a defined set of XML APIs. Reinvent warehouse management system strategies through innovative technology, core industry-specific features, and a consumer-grade user interface. Optimize resources, streamline supply chain activities, and enable “social” collaboration. Gain a competitive edge based on core industry-specific features. Centralize processes around billing, scheduling, inventory, labor, and transportation.
Modern warehouse management

A holistic approach to warehouse management requires overseeing every facet of warehouse and distribution needs. This includes picking, shipping, receiving, dynamic slotting, and put away, as well as order processing, wave planning, inbound quality control, and VAS operations. Improve core warehousing processes. Choose between different types of pick methods, put-away strategies, and data capture, depending on your industry and warehouse design.

To stake out a competitive advantage, it’s necessary to redefine warehouse management to include:

- Optimizing warehousing activities with innovative features such as task interleaving, cross-docking, trans-shipment, facility viewer, end-to-end serial number tracking, dynamic slotting, and backflush capability.
- Achieving greater visibility through interactive dashboards, reports, analytics, and business intelligence.
- Managing warehouse operations on-the-go using Infor Supply Chain Execution’s Warehouse Director.
- Minimizing costs by streamlining inventory, automating tasks, and optimizing resources.
- Collaborating, communicating, and receiving alerts.
- Integrating seamlessly across various products and platforms using Infor ION.
Realize the full potential of your business

Featuring tools that not only automate complex and repetitive processes, but also power the free flow of information, Infor Supply Chain Execution is a unified solution that delivers the scalability and configuration necessary for manufacturers to thrive.

Benefits

Unlike other solutions, Infor Supply Chain Execution uniquely offers:

- WMS and transportation management combined into a single solution on a single database.
- The most powerful tools available for helping you achieve superior results through advanced supply chain collaboration.
- Built-in best-practice management to improve every aspect of supply chain performance.
