

Propper International meets today's and tomorrow's needs by upgrading Infor M3

About the company

Propper International™ is one of the largest suppliers of military apparel and related items to the US Department of Defense. Propper also manufactures, markets, and distributes uniforms and specialty apparel to law enforcement and correctional personnel, as well as specialty retailers. Propper manages its global supply chain from its headquarters in St. Louis, Missouri. For more information, visit www.propper.com.

Business goals

- Implement a robust and configurable ERP system with industry-specific functionality.
- Easily adapt to changing market environments and support multiple business models.
- Gain enterprise-wide visibility across critical business processes.

“ Infor M3 is a very stable ERP system that supports both our commercial and government work orders. The configurability of the system is a huge differentiator from other ERP systems on the market.”

Jason Alvey, Director of IT at Propper, Propper International

Improving business processes by upgrading Infor M3

Crafting a configurable ERP environment

What started in 1967 as a single contract to make the iconic, white Dixie Cup hats for the Navy, turned into five decades of dedication and hard work as Propper International grew to become the largest single provider of US military apparel in the country. Over 50 years and 120 million finished garments later, Propper International continues to incorporate precision, durability, comfort, and style into each unique piece of gear. To continue to meet demands for its commercial make-to-stock and government make-to-order contracts, Propper upgraded to Infor M3, Version 13.3. Not only does Infor M3 support the many configurations needed to produce tailored gear, the solution's configurability also allows Propper to manage its numerous supply chains without scattered data and costly modifications.

Delivering industry-leading capabilities

By implementing Infor M3, Version 13.3, Propper is able to harness the solution's capabilities, such as a combination of industry-specific functional enhancements and powerful configurability to provide an environment where custom modifications can be eliminated. Additionally, Infor M3's streamlined integration with Infor Ming.le®, allows Propper to take advantage of the latest in social collaborative user experiences for higher user productivity. Because Infor Ming.le is fully embedded within Infor M3 via Infor M3's multi-browser HTML5 thin client, Propper's employees can access Infor M3 anywhere, on any device. Plus, integrating Infor BI with the Infor Ming.le framework gives Propper the organizational visibility and support to aid operational decision-making with in-context business intelligence.

Business outcomes

-  Successfully implemented a robust ERP system that supports multiple supply chain needs.
-  Improved operational decision making with organizational visibility.
-  Moved from a legacy ERP system to an industry-aligned ERP, which should result in significant cost savings.
