Call for papers: Best practices

Thank you for your interest in submitting a session proposal for Inforum 2014.
The following best practices will help you submit your proposal.

First, submit a high-level overview of what you would like to present. This overview should include the specific names of the Infor product(s) and/or technology you use/used; the challenge(s) you overcame using the product(s); and the positive impact this had on your organization.

Some positive impacts may include how your organization:

- Creatively solved a challenging business-critical issue
- Improved operational processes or decreased costs
- Used technologies, such as business intelligence or mobility, to serve the needs of various business stakeholders
- Integrated third-party software with Infor applications to drive process improvement
- Implemented cloud deployment to achieve speed as a competitive differentiator

All proposals must be submitted no later than June 5, 2014. Accepted papers will be promoted in the conference catalog and presented at Inforum 2014. If your proposal is accepted, you may receive a complimentary registration pass for the conference.

If you have questions about the Call for Papers process or details, please email
