Infor Local.ly

Reduce risk

New regulations, taxes, and business standards emerge constantly, increasing your risk of expensive penalties for non-compliance in any country in which you do business. Infor® now offers a unique approach for easily updating your ERP system to satisfy local compliance requirements—Infor Local.ly™, our new cloud-based localization service. With Infor Local.ly, you can rest assured that you’re staying up to date on any global requirements that apply to your business.

Take a fresh approach

Traditionally, ERP systems have required hard-coded customizations to manage region-specific information such as government reporting requirements, tax accounting, and banking information. But that kind of information changes frequently and varies between regions. Infor Local.ly manages localized information from your ERP system, integrating it seamlessly and updating it automatically, so you keep critical regulatory information up to date quickly and easily without disrupting your ERP system.

Gain better control of your international operations and lower your compliance risk.
Stay up to date with compliance requirements

Your ERP solution should make it easier for you to stay within the law on the day your software is implemented, but what happens when regulations inevitably change? Infor Local.ly streamlines the process of keeping your ERP system current for complete regulatory compliance.

Keep current automatically

Infor Local.ly gives you a simple way to keep your ERP system accurate and up-to-date with regulatory requirements at a low total cost of ownership (TCO) by delivering:

- **Automatic monitoring and updates to localization requirements**—Whether you operate in many jurisdictions or just one, the cost and effort required for monitoring tax and regulatory changes can add up. Infor Local.ly provides automatic monitoring of regulatory information via the optional Infor Local.ly Knowledge Base, a web-based repository proactively updated by Infor to deliver the latest regulatory, statutory, and cultural ERP localization requirements.

- **Updated localizations without an ERP upgrade**—You can upgrade your regulatory compliance information more quickly, and at a lower cost with Infor Local.ly, because localized regulatory information is handled independently of your ERP system, but it’s still integrated with your ERP data so that you can treat it as an integral part of your planning and operations.

- **Increased regulatory and statutory compliance**—Infor Local.ly helps you reduce the risk of regulatory non-compliance by streamlining and simplifying the process of updating localizations to your ERP system, so that you can feel confident that your system meets any new requirements.
Cover the full scope of regulatory compliance

The three powerful parts of Infor Local.ly combine to cover the full range of requirements you need to consider for complete regulatory compliance.

- **Integration**—You’ll no longer need to upgrade your ERP system to address changing local regulations.

- **Requirement monitoring**—You’ll gain better control of your international operations and lower your compliance risk with data that’s regularly updated by Infor for more than 50 countries.

- **Rules-based accounting**—You can define consistent, centralized rules to harmonize accounting data and standardize your financial process with the rules-based accounting capabilities built into Infor Global Financial Controller.

**Benefits:**

- Faster localization release cycles
- Greater ability to update localizations independently of your core ERP system
- More flexibility to leverage the same ERP system globally
- Reduced risk of non-compliance
