

Infor PLM Accelerate

Speed product realization

Infor PLM Accelerate™ speeds product realization by putting information—from ideation and requirements planning to concept development, design, manufacturing, distribution, maintenance, and more— into the hands of the people who need it, when they need it. When everyone in the product lifecycle is part of the process flow, they can make smart and quick decisions, so they can get innovative products to market quicker.

Accelerate product realization and drive product innovation

With Infor® PLM Accelerate, you'll gain real-time visibility into projects and processes, so you can make better, more informed business decisions. You'll be able to decrease cycle times for new product introductions, improve reuse, and have fewer systems to maintain. And you'll be able to improve communication, collaboration, and data flow throughout your enterprise and supply chain, so you can reduce scrap and rework, while eliminating waste.

- Keep pace with the market, respond immediately to changes, and remain compliant.

Respond more quickly to changing markets

With Infor PLM Accelerate, you get a comprehensive system that's designed for change. You can keep pace with fast-moving market conditions, respond immediately to changes in supply chain operations, adhere to ever-evolving compliance and regulatory standards, and meet the needs of your customers—now and into the future.

Use a complete product data management and lifecycle solution

Creating and launching new products involves a multitude of internal and external teams. Infor PLM Accelerate gives you functionality for EBOMs and MBOMs, change management, requirements and configuration management, and technical documents—which can all link together across electrical, mechanical, and software/firmware disciplines. Additionally, the centralized database ensures that, no matter which department the data originates from, all your users have access to the correct, most current product information.

Powerful PDM capabilities ensure that everyone is accessing the right information, which helps to avoid errors and eliminate delays. Distributed storage vaults make information quickly accessible anywhere, supporting global product development and supply chain collaboration strategies. Visual collaboration broadens and increases the pace of discussions, resulting in better products that can be brought to market faster.

Streamline your company's product lifecycle management

Infor PLM Accelerate provides a full-featured, scalable, flexible, and secure PLM solution, based on industry best practices that adapt to your changing business practices. Infor PLM Accelerate is built on the Infor Xi technology platform, which gives you an easy-to-use, consumer-grade interface designed to increase productivity.

Bill of materials (BOMs)—Manage and synchronize multiple sources of information in a single database in order to create and maintain structured, multilevel BOMs for each stage of the product lifecycle.

Parts management—Take complete control over the lifecycle of parts, including automated workflows and permissions to help manage the approval processes. Take advantage of automatically maintained links to CAD models, drawings, and documents.

Component engineering—Simplify electronic component selection, approval, sourcing, and compliance processes with instant access to current and obsolescent technical and compliance information.

Change management—Gain complete upstream and downstream traceability and visibility into the change status of a product or system.

Project management—Manage product development, global collaboration, and ETO processes for complex projects with dashboards for completion status, deliverables, stage-gate management, and more.

Requirements management—Create single, multidiscipline, and synced requirements hierarchies for managing complex engineering systems, including planning, development, and realization.

Configuration management—Fully manage the configuration of a product or system with graphical online business process workflows, notifications, and reminders for identification, control, and more.

Document management—Allow users across multiple teams and locations to author, visualize, share, and publish critical information—all within a central, controlled, and collaborative environment.

Quality management—Seamlessly manage risk; improve quality; and attain multiple forms of compliance via failure mode effects analysis (FMEA) processes for TS/16949, AS9100, FDA QSR, and more.

Systems engineering—Manage the lifecycle of complex multidisciplinary products with cross-functional teams—from requirements through development, manufacture, and support—to achieve collaborative systems-level product design.

Technical publications—Allow users to author, visualize, share, and publish component content for topics-based, modular documentation in a central, controlled, and collaborative environment.

Visual collaboration—Gain control of your product development discussions by being able to easily and securely view and graphically comment on parts and documents, and add relevant context, including 3D models, drawings, and Microsoft® Office documents.

Infor Xi Technology—Use a next-generation technology platform with a consumer-inspired user experience, contextual visibility, science-driven analytics, and integration with other Infor solutions. Infor Xi includes:

- **Infor ION® Process**—Create certified integrations between Infor PLM Accelerate, Infor LN, and Infor CloudSuite™ Industrial (SyteLine®).
- **Infor Document Management**—Gain easy access to accurate and up-to-date information, maintain business rules for document creation, and ensure everyone is working from common resources.
- **Infor Ming.le®**—Establish a common workflow and organize conversations into enterprise-wide streams where users can easily collaborate.

Outpace your competition in creativity—and speed

Infor PLM Accelerate goes beyond the capabilities of standalone product lifecycle management products to unite your entire product lifecycle for a single view of the truth. As a result, you get actionable information from design and manufacturing through purchasing, quality assurance, the supply chain, and beyond.

Benefits

- **Advanced**—An out-of-the-box solution extends beyond product data management to provide end-to-end product lifecycle management throughout the supply chain.
- **Flexible**—A highly configurable modeling engine lets you to adapt solution templates to your specific needs and implement your own processes and user interfaces.
- **Scalable**—Scale to whatever your business needs. Keep pace with global growth.
- **Secure**—The highly configurable security allows user-and role-based access.
- **Comprehensive**—Manage product engineering, program management, requirements management, component engineering, technical documentation, and quality management.
