

Pulse Mining delivers superior analytic apps to the industry with agile BI platform

About the company

Pulse Mining Systems is an Australian software development company that works collaboratively with its mining industry clients to capture and manage their operations and business data across the entire mining cycle from exploration to full production, whilst providing insight into specific productivity bottlenecks and pain points through state-of-the-art visualization and analytics. To learn more, visit www.pulsemining.com.au.

Requirements

- BI platform that would support its agile and frequent development cycle
- Provide anywhere-access to data in an intuitive and flexible manner from the cloud
- Simplify complex process flows from data sources

Benefits

- Faster development cycles through multi-tenancy or virtual spaces—virtual spaces for dev, test, and production iterations
- Launched core analytics product in 8 weeks, with each new customer deployed in a matter of days
- Fast integration with diverse source ERP systems that are popular within their customer base to support daily refreshes

“We started from a zero base and have developed cutting edge analytical tools for a selection of clients in less than six months. Our average sprint time is now at two weeks and we have a line of customers waiting to buy our new product.”

Rob Parvin
Analytics Manager, Pulse Mining Systems
