

# Scholle IPN improves performance with Infor LN

## Scholle IPN sought to overcome three major challenges in its operations:

The company needed to optimize its business processes, give its workers access to a more robust business system, and implement a solution that met the unique requirements of its operations. Not only did Infor® LN fulfill all of these needs as Scholle’s new ERP solution, but with Brazilian localization, LN was also able to help the company meet all local legal requirements—without any customizations.

---

“With LN, we’re experiencing greater support, higher reliability, and seeing significant process improvements. Infor’s great Infor consulting team was there to help us support and develop our business, especially with the Brazilian localization and cost allocation.”

## Identifying business challenges

With a true global footprint and vertical integration of many of the steps within the manufacturing process, Scholle needed to be able to implement an ERP solution that would help the company optimize business operations, provide fiscal localizations, and could integrate with existing systems—all without any significant disruptions to business.

### Business result and efficiencies

- Reduced time to complete month-end costing process by 50%
- Improved fiscal and financial process performance by 40%

---

**“To remain competitive and meet consumer demand, organizations need to streamline operations and increase the ability to access and analyze data. Infor understands the packaging market, and provides a specialized application. This is the result of in-depth conversations and knowledge-sharing with customers who want to achieve the high efficiencies necessary to successfully navigate the complexity and market pressures of the industry today.”**

**Fernando Doreto**  
Account Manager, Infor Brasil

## Optimizing processes

Scholle’s previous ERP system couldn’t support many of the company’s business processes, and the system wasn’t completely integrated with Scholle’s fiscal solutions. This generated a significant amount of extra work and the results often needed to be rechecked. For instance, before implementing LN, Scholle calculated taxes manually, which was time-consuming and subject to errors. With LN, Scholle can now perform its business processes in less time and with greater accuracy and reliability—allowing the company to better focus on other critical issues.

After implementing LN, Scholle was also able to complete its month-end costing process in half the time. The company improved overall fiscal and financial activities performance by 40% because LN was able to easily handle all important information due to the Brazilian localization. In addition, Scholle was able to optimize its import/export processes, as well increase the efficiency of payment and collection processes via automation.
